The book describes methods for working with elements, subgroups, and quotient groups of a finitely presented group. The author emphasizes the connection Computing with finitely presented groups The Todd-Coxeter coset enumeration process [8] [9] is a method for enumerating the cosets of a subgroup of a finitely presented group. The workings involved Decision problems in finitely presented groups Finitely presented groups are constructed as quotients of free_group: sage: F.a .. The maximal number of cosets before the computation is aborted. OUTPUT:.
